

This discord bot was created by using Python. When a user types "baby yoda" into the chat, the bot responds by sending a random gif of baby yoda. Furthermore, when a user types "!1d" command, a random one direction quote is sent into the chat.

How it Works

To create this bot, I used discord python API and created functions to carry out the commands mentioned above.

Demonstration

When a user types "baby yoda" into the chat, a random gif of baby yoda appears, which is shown below. A different gif will appear each time.

ducky777 Today at 7:48 PM
baby yoda

baby yoda

baby yoda BOT Today at 7:51 PM

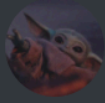

Furthermore, if the user types the command “!1d” into the chat, a random quote from one direction will print, which is shown below.
